## LANGUAGES/COMPUTER SKILLS

---

- **Computer Skills:** Python, C++, SQL, R, STATA, Julia, Coq, Linux, MATLAB, OCaml, JavaScript, PHP, LaTeX
- **Languages:** Chinese - Native, English - Professional in Working (C2 Level), French - Intermediate (B2 Level)
- **Tools:** Numpy, Pandas, Scikit-Learn, Tensorflow, PyTorch, Gurobi, Cplex, Rstudio, MySQL, Matplotlib, Spyder, Jupyter Notebook, Overleaf

## EDUCATION

---

- **Oxford University** Oxford, the United Kingdom  
*Master of Science (OMMS)* Oct. 2024 - Jul. 2025
  - **Major:** Mathematics (track: statistics, optimization, machine learning)
- **École Polytechnique(X)** Paris, France  
*Bachelor of Science - GPA: 3.85/4.00* Aug. 2021 - Jul. 2024
  - **Major:** Double major in Applied Mathematics and Computer Sciences
  - **Courses:** Numerical Linear Algebra, Real Analysis, Complex Analysis, Fourier Analysis, Numerical Analysis, Numerical Optimization, Optimization and Control, Asymptotics statistics, Numerical ODE, Hilbert Space, Quadratic Forms, Machine Learning, Functional Programming, Compiler, Computer Architecture.
- **University of Cambridge - Cambridge Centre for AI in Medicine** Cambridge, UK  
*AI and Machine Learning in Healthcare Summer School* Aug. 2022 - Sep. 2022
  - **Content:** Analysis of genomic data and clinical trial data through biostatistics and machine learning. Topics about biostatistics, Machine Learning in Medical Imaging.
  - **Honor:** With full financial scholarship provided by Cambridge University

## RESEARCH INTERNSHIP

---

- **HEC Paris** Jouy-en-Josas, Saclay, France  
*Bachelor Thesis* December. 2023 - June, 2024
  - **Research Topics:** Feature-Incremental Machine Learning via Robust Optimization Approach
  - **Supervisor:** Vassilis DIGALAKIS Jr (HEC Paris ISOM), Michael Lingzhi Li (Harvard Business School)
  - **Department:** Information Systems and Operations Management
- **Center for Research in Economics and Statistics (CREST)/LIX** Palaiseau, France  
*Project Research Intern* October. 2023 - June. 2024
  - **Research Topics:** Analysis of city composition based on basic amenities including public transport, BATO-MOUCHE Project between CREST and LIX. [\[GitHub page and report\]](#)
  - **Supervisor:** Sarah J. Berkemer - (LIX Aimbio Team)
- **HEC Montréal/Université de Montréal** Montréal, Canada  
*Visiting Researcher (Phd Level)* June. 2023 - October. 2023
  - **Research Topics:** Robust Optimization of Fixed-Job Scheduling Problem.
  - **Supervisor:** Maryam Daryalal
  - **Department:** Department of Decision Sciences and Operation Research
  - **Award:** Mitacs Globalink Research Scholarship
- **CNRS and LIX** Palaiseau, France  
*Research Intern then Summer Inter* December. 2022 - August. 2023
  - **Research Topics:** Dissipative quadratizations of polynomial ODE systems. [\[Paper\]](#) accepted by to 30th International Conference on Tools and Algorithms for the Construction and Analysis of Systems, TACAS 2024.
  - **Software:** [DQbee](#), a python package for computing the dissipative quadratization of polynomial ODE system.
  - **Supervisor:** Gleb Pogudin
  - **Team:** MAX - Algebraic modeling and symbolic computation (Joint Team with CNRS)

## PUBLICATIONS AND PRESENTATIONS

---

- [1] Yubo Cai and Gleb Pogudin. Dissipative quadratizations of polynomial ode systems. In Bernd Finkbeiner and Laura Kovács, editors, *Tools and Algorithms for the Construction and Analysis of Systems*, pages 323–342, Cham, 2024. Springer Nature Switzerland, <https://arxiv.org/abs/2311.02508>.
- [2] Yubo Cai. Analysis of city composition based on basic amenities including public transport, 2024, **presented** in Hi!Paris BATO-MOUCHE Big-City Analysis Seminar.

## PROJECTS

---

- **BATO-MOUCHE Project:** Analysis of city composition based on basic amenities including public transport.
- **DQbee:** DQode is a Python Library to compute the optimal inner-quadratic quadratization and dissipative quadratization of a given polynomial ODE system.
- **Infinite Blade:** a text adventure game based on the tree structure written in Haskell.
- **Chinese OCR based on CNN and CRNN:** Using CNN for recognition of individual handwritten Chinese characters and CRNN for OCR of lengthy passages of Chinese. The project is sponsored by Intel API
- **Reachability Problem of Nonlinear System with quadratization method:** Research Project on find the optimal quadratization method which fit the reachability error bound function
- **PaperFriend Desktop Application:** A smart journaling desktop application to help you track your mood and take better care of your mental health. The application is accomplished in C++ and Qt application. Working on the frontend work of creating the main window and functions of the application
- **Algorithms for Numerical Analysis of Catalan Numbers:** Implement the algorithms for numerical analysis of Catalan numbers and Motzkin Numbers in Jupyter Notebook with Python. The project includes asymptotic analysis, numerical analysis, mathematical modeling, etc. Apply the Catalan in the problem like binary trees, Paths of Triangle and dynamic programming.
- **Nim game with Coq:** This project is using the language **Coq** to prove the winning strategy of Nim Game.
- **Lossy Image Cpmression:** More advanced level programming in python. Programs about data struction, algothims and Computer Vision, also conclude basic knowledge about cryptography.The goal of this project is to develop a lossy image compression format close to JPEG. Lossy compression algorithms allow to greatly reduce the size of image files at the price of loosing some data from the original image.
- **Pricing an option with binomial models:** Using the binomial models in the pricing of options with different time period

## TEACHING EXPERIENCE

---

- **HEC Montreal:** Teaching Assistant Editor - **MATH 20604A** - Linear Optimisation Models - 2023 Summer.

## HONORS AND AWARD

---

- [1] **INFORMS Undergraduate Scholarship** - Amount: 1250 \$ (Unable to attend the meeting due to schedule conflict)
- [2] **Mitacs Globalink Research Scholarship** - Amount: 6000 €
- [3] **ETAPS Student Scholarship** - Amount: 1000 €
- [4] **ANR JCJC project OCCAM research intern scholarship** - Amount: 1200 €
